

# Research for Educators

Paperback: Teachers need to be reflective practitioners who constantly strive to improve their practice. This kind of reflective orientation requires practitioners who are conversant with the field of educational research. Research for Educators demystifies the research process and helps teachers appreciate that their role requires this understanding for two reasons: first, they need to be researchers of their own classroom practice; second, they are consumers of research and need to understand how it works in order to know what to trust. Written in an accessible and engaging style, Research for Educators is an excellent introduction for teachers to the world of research. Dr Lisa Kervin lectures in the Language and Literacy, Curriculum and Pedagogy and Research Methods strands in the Faculty of Education at the University of Wollongong. Her major research interests are in teacher professional development and the use of technology to support student literacy learning. Dr Wilma Vialle is an Associate Professor in Educational Psychology and Gifted Education in the Faculty of Education at the University of Wollongong. Her major research interests are in intelligence and giftedness with a particular emphasis on equity issues. Dr Jan Herrington is an Associate Professor in IT in Education at the University of Wollongong. She has extensive experience in the instructional design, teaching and researching of online and multimedia learning environments, and in teaching research approaches and methodologies. Dr Tony Okely is a senior lecturer in Physical and Health Education and Research Methods at the University of Wollongong, where he also directs the Child Obesity Research Centre. His research interests include developing, implementing and evaluating interventions to promote physical activity and prevent and treat child obesity.
