

Everyday Science Mysteries: Stories for Inquiry-Based Science Teaching

What causes condensation? Does temperature affect how well a balloon will fly? How do tiny bugs get into oatmeal? Through 15 mystery stories, this book memorably illustrates science concepts for students and reinforces the value of learning science through inquiry. Each mystery presents opportunities for students to create questions, form hypotheses, test their ideas, and come up with explanations. Focused on concepts such as periodic motion, thermodynamics, temperature and energy, and sound and sound transmission, these mysteries draw students into the stories by grounding them in experiences students are familiar with, providing them with a foundation for classroom discussion and inquiry.
